This report presents the Wyoming State Epidemiological Outcomes Workgroup (SEOW) with findings from a comprehensive data review completed by the SEOW and University of Wyoming, Wyoming Survey & Analysis Center (WYSAC). It includes data on alcohol, tobacco, illicit drug use, prescription drug abuse, mental health, and general related factors. For each substance, data are organized into three groups: consequences, consumption and/or prevalence, and substance-specific risk and protective factors.

Purpose of the SEOW

The SEOW is a program of the Wyoming Department of Health (WDH) directed by the WDH Public Health Division (PHD). It is comprised of representatives from:

- Wyoming Department of Health,
- Wyoming Department of Education,
- Wyoming Department of Corrections,
- Wyoming Department of Transportation,
- Wyoming Board of Pharmacy,
- Tribal services from the Arapaho and Shoshoni Tribes,
- Wyoming Prevention Management Organization,
- Community prevention providers, and,
- Researchers from the University of Wyoming, WYSAC.

The SEOW's charter is to provide guidance and information regarding the available data associated with substance abuse and mental health issues throughout the state. In particular, the SEOW is responsible for gathering, reporting, and disseminating information regarding substance abuse and mental health data in Wyoming. It also serves as a decision-making body regarding the deliverables for the SEOW grant. The SEOW helps determine directions to pursue, review results, and make recommendations.

Its support comes from the WDH and a grant from the Federal Substance Abuse and Mental Health Services Administration (SAMHSA).

Deliverables

As part of its funding, the SEOW is charged with developing state and community epidemiological profiles of key substance use and mental health indicators. WDH contracts with WYSAC to complete these deliverables.

This report constitutes the community profile. Its primary purpose is to serve as a reference document to present the key indicators as identified by the SEOW at the county level regarding alcohol, tobacco, illicit drugs, prescription drugs, and mental health issues. The data presented here are then reused to create more accessible documents that can be used to inform policy makers, legislators, and the public of the available state-level information about mental health and substance abuse prevention.

Procedures

During SEOW meetings in early 2011, the SEOW chose to focus on six areas: alcohol, tobacco, illicit drug use, prescription drug abuse, mental health, and general related factors. SEOW members discussed thematic priorities, methodological concerns, data reliability, and

procedures for reviewing variables and data sources. WYSAC presented the SEOW with a broad list of variables for potential inclusion in the state and community profiles. The SEOW then decided to subdivide variables in each of these areas into three categories: consequences, consumption and/or prevalence, and risk and protective factors. These issues were revisited in 2014, and any changes are reflected within this profile.

The SEOW appointed a subcommittee to assign priority scores to each potential variable. The subcommittee developed consensus priority scores for each potential variable ranging from one to four, with one being the highest priority and four being the lowest. A score of one reflects great importance of the concept, strong accord between the concept and the indicator, and high data reliability and availability. A score of four, in contrast, reflects relatively low importance of the concept, weak accord between the concept and the indicator, and low data reliability and availability. Based on a decision of the subcommittee, only those indicators that have a priority one or two were included in the state and community profiles.

During the process of reviewing the state and community profiles, the SEOW explicitly decided to forego all conclusions and interpretations of the results at this time. The SEOW felt that such data interpretation is best completed when the data is used outside of this reference document, such as in the creation of Fact Sheets and Information Briefs that are tailored to particular audiences. As a result, the notable findings section and the report purposely omit any data interpretations.

Presentation Conventions

During SEOW meetings in April and June 2011, the Workgroup reviewed early drafts of the state and community profiles and offered guidance on data presentation. Data presentation conventions include:

- A graphic in the upper outside corner of each page indicates whether the variable on that page is a consequence (in which case the upper cell is shaded), consumption and/or prevalence (middle cell shaded), or risk or protective factor (lower cell shaded).
- This report breaks down the data results by county, with the graph in order from highest to lowest. In the case of a tie, then the counties with the ties are listed in alphabetical order.
- To increase the stability at the county level, the provided estimates represent moving averages of multiple years for each of the indicators.
- Data are presented in graphs with data tables on the side. Where available, confidence intervals appear in the data tables.
- Scales used on all graphs are as consistent as possible. For variables represented as percentages, three vertical axis scales are used whenever possible: 0 to 100%, 0 to 50%, and 0 to 10%.

Rate Calculation

To make results comparable between Wyoming counties, this report presents calculated rates for data associated with four data sources:

- Arrests (UCR)
- Alcohol Related Automobile Fatalities (FARS)
- Alcohol Related Car Crashes (WYDOT)

These aforementioned rates are calculated by forming a ratio of the counts from a given indicator (e.g., the total number of DUI arrests) over the appropriate population count and multiplying it by 100,000. For example, during 2006, Carbon County recorded 45 Alcohol Related Car Crashes resulting in fatalities, injuries, or property damage. During that same year, the Census Bureau estimated a total population of 15,136 in Carbon County.

To calculate the rate per 100,000 population for 2006, the following formula is used:

$$R = \frac{C_1}{P_1} * 100,000 = \frac{45}{15,136} * 100,000 = 297.3$$

Where:

R is the rate to be calculated

C_1 is the counts for the Year from the outcome data source

P_1 is the estimated populations for the Year

To calculate the rate per 100,000 population across multiple years, the following formula is used:

$$R = \frac{C_1 + C_2 + \dots + C_n}{P_1 + P_2 + \dots + P_n} * 100,000$$

Where:

R is the rate to be calculated

C_1 to C_n are the counts for Year 1 to Year n from the outcome data source

P_1 to P_n are the estimated populations for Year 1 to Year n

Data Limitations

The information presented in this report is assembled from various sources that provide comprehensive results on a range of social problems. Readers are encouraged to visit the website of each data source and consider their limitations.

Chart 16: Social Norm: Binge Drinking (Grades 10 and 12)

Definition: The percentage of Wyoming students who believe that most students have binge drunk on one or more occasions during the past two weeks.

Data Source: PNA 2010-2014

Note. Laramie County is missing data from all years; therefore, this county is excluded from the presented estimates. Crook (2010, 2014), Niobrara (2010, 2012), Sweetwater (2010, 2014), and Weston (2010, 2012) represent the average of two survey years. The included years are listed in the parentheses of the previous sentence.

Chart 28: Wyoming Adult Males Who Report Currently Using Smokeless Tobacco

Definition: The percentage of Wyoming men reporting currently using smokeless tobacco.

Data Source: BRFSS 2011-2013

Note. Hot Springs and Niobrara County percentages were combined in BRFSS reporting. Therefore, data from these counties are excluded from the presented estimates. The use rates by males is much higher. Given this disparity, the SEOW chose to prioritize male smokeless use for continued surveillance.

Wyoming	35%

Chart 74: Interactions with Antisocial Peers—High Risk Rate (Grades 6 and 8)

Definition: The percentage of Wyoming students who are classified as high risk because of their answers to the scale, which measures the number of close friends that have been arrested, suspended from school, attempted to steal a vehicle and/or attacked someone with the intent to cause harm.

Data Source: PNA 2010-2014

Note. Laramie County is missing data from all years and Sheridan county grades 6 and 8 are missing for two of the three years; therefore, these counties are excluded from the presented estimates. Crook (2010, 2014), Niobrara (2010, 2012) and Sweetwater (2010, 2014) represent the average of two survey years. The included years are listed in the parentheses of the previous sentence.
