

You can't see, taste or smell them. They're sneaky little critters, and they can spread throughout the kitchen and get onto cutting boards, utensils, countertops, and food. They're foodborne bacteria-and if eaten, they can cause foodborne illness. So on your mark, get set, go . . . CLEAN!

## Wash!

Always wash hands with warm water and soap:

- before handling food;
- after handling food;
- after using the bathroom;
- after changing a diaper;
- after tending to a sick person;
- after blowing nose, coughing, or sneezing; and
- after handling pets.

## Surface Cleaning Tips

Using a mixture of $3 / 4$ teaspoon liquid chlorine bleach per quart of water (or one tablespoon bleach per gallon of water) can provide some added protection against bacteria on surfaces. Flood the surface with the bleach solution and allow it to stand for several minutes, then rinse with clean water and air dry or pat dry with fresh paper towels. Bleach solutions can lose their effectiveness over time, so discard unused portions after one week.

## REUSABLE

## SHOPPING BAG TIPS

- If you use cloth shopping bags, make sure to wash them in the washing machine frequently.
- For reusable grocery bags that are not machine washable, wash by hand frequently with hot water and soap.
- When shopping, put meat, poultry and fish in separate plastic bags. This will help prevent the juices from leaking out and contaminating your reusable bags and your food.

## Fruit \& Veggie Handling

## PREP THE KITCHEN

Before preparing fruits and vegetables, wash your hands with warm water and soap and use hot water and soap to clean your cutting board,
 countertop and utensils.

USE WATER - Thoroughly rinse fresh produce under running tap water, including those with skins and rinds that are not eaten. Packaged fruits and vegetables labeled "ready to eat", "washed" or triple washed" need not be washed. Never use detergent or bleach to wash fresh fruits or vegetables. These products are not intended for consumption.

SCRUB THOROUGHLY - Rub firm-skin fruits and vegetables under running tap water or scrub with a clean vegetable brush while rinsing with running tap water.

## BAC! Attack

How long should you wash your hands to send bacteria down the drain?
a. 5 seconds
b. 10 seconds
c. 15 seconds
d. 20 seconds
