Unknown age
Stillborn

TENTH BIENNIAL REPORT

The undertakers don't bury people any more and come for the permit weeks after the burial.

The city health department co-operates in matters of hygiene and sanitation as the county health department does with them.

I believe the greatest investment that the State of Wyoming can make is to provide the means whereby stern, efficient management can be enabled to carry out the details necessary to save, not only the immediate life of the infected, but prevent the too often serious complications rendering the future human far less than one hundred per cent value to the state and himself or herself.

Much more can be said upon this subject, but I fear I have now exceeded the length of the paper you requested.

Thanking you for the courtesies extended us from your department, I am,

Yours truly,

H. R. LATHROP, M. D.,
Health Officer of Natrona County.

DEATHS AGE INCIDENCE

1929		1930	
Under 10 years	Cases Deaths	Under 10 years	Cases Deaths
Under 10 years	0 0	Under 10 years	0 0
10 to 20 years	0 0	10 to 20 years	1 2
20 to 30 years	1 1	20 to 30 years	1 2
30 to 40 years	2 2	30 to 40 years	1 1
40 to 50 years	3 3	40 to 50 years	3 3
50 to 60 years	3 3	50 to 60 years	4 4
*Over 60 years	9 9	Over 60 years	4 4

*Here note the importance of advanced age as a mortality factor. Probably due more to the lessened vitality and possibly of concurrent physical disabilities in old people rather than to malignancy of the strain of infection.

WYOMING

Vaccination

It will be noticed particularly in Fremont County, inclusive, that case incidence is the lowest in many years. It is too early to tell.

I am not familiar with vaccination has been in Fremont County vaccination increased from about 1928 to one hundred per cent.

Particularly was observed on the Shoshone reservation of 1930, and where in 1930 only one case of Indian girl. This is the first case we have not had from five years.

Vaccination with tick fever has been formed extensively and nor will we be able to reach it unless we can follow it up over the selected group as may be indicated.

I, personally, am of the opinion that vaccine is not positive proof and certainly in the threatening the mortality of the disease.

This, however, is a matter of the unlowered mortality of the discoverers of the vaccine to date can only be the milder strains of the malignant types, although these. Results in malignant past season in Montana had and two deaths occurred in vaccinated persons.

It is my personal belief that the way of human experimentation with this vaccine. However, as day in the way of prevention be encouraged.

The Future of

As is generally well known, the experiments that have gained
