Family Health BY WILDFLOWER

A free and easy-to-use phone app for your family

Add each family member to the app to keep track of their health. Track your entire family's doctor appointments, health needs, shots, height, weight & more

Pregnancy tracker has personal tools like a weight gain tracker, due date calculator, & kick counter with doctor approved weekly updates & daily tips

Manage your entire family's health in one easy-to-use phone app.

Brought to you FREE by WYhealth and the Wyoming Department of Health.

Download the app for free!

Text the word "FAMILY" to 307-317-0819

Search "family health wildflower" in your app store

FIT Kit Program

- Provides resources and information to increase colorectal cancer screening in Wyoming
- Focuses on increasing participation in the FIT Kit Program administered by the Wyoming Cancer Program supported by the American Cancer Society (ACS)
- FIT Kits are available at no cost through the program and the WCRS.

Health System Change

- **New CDC initiative**
- **Working with health systems throughout Wyoming**
- **Implementation plans**
- **Evaluation plan**

Patient Navigation Services

Types of navigation:

- Network with state-wide navigators
- WCRS – navigation for screenings and treatment
- Program Nurses – navigate women needing resources for breast and cervical cancer screenings. Now CDC supported

- As of July 01, 2018, all claims for the WBCCS and WCCS need to be submitted electronically through the Medicaid web portal or clearinghouse
- Submit claim within 3 months of the date of service, must be dated within 12 months of the date of service
- Required reports must be attached to the claim. If the attachment is not received within 30-days of the electronic claim submission, the claim will be denied
- The WCP is the payer of last resort

Cancer Screenings for Wyoming Residents

The key to life after cancer is early detection.

Know when to get your cancer screening

Males age 21-29

- No cancer screening recommended at this time. Males at an increased risk for cancer due to family history, genetic disorders or other factors, should speak with their doctor about screenings.

Males age 30-39

- No cancer screening recommended at this time. Males at an increased risk for cancer due to family history, genetic disorders or other factors, should speak with their doctor about screenings.

Males age 40-49

- At age 45, males at an increased risk for prostate cancer due to family history, genetic disorder or other factors, should speak with their doctor about screenings.

Males age 50-64

- At age 50, males should screen for colorectal cancer.
- At age 50, males at average risk for prostate cancer should speak with their doctor about screenings.
- At age 55, males with a history of smoking should speak with their doctor about lung cancer screenings.

Males age 65 and older

- Colorectal cancer screenings are recommended until age 75. At age 76, speak with your doctor about the need for continued screenings.
- Males with a history of smoking should speak with their doctor about lung cancer screenings.

Recommendations based on the U.S. Preventive Services Task Force and the American Cancer Society recommendations for cancer screenings.

Know when to get your cancer screening

Females age 21-29

- At age 21, females should have a Pap test every 3 years. HPV tests recommended if Pap test is abnormal.

Females age 30-39

- At age 30, females should get a Pap test and HPV test every 5 years or can continue to get a Pap test every 3 years.

Females age 40-49

- Pap test and HPV test should continue every 5 years or a Pap test every 3 years.
- At age 40, females at an increased risk for breast cancer due to family history, genetic disorder or other factors should speak with their doctor about screenings.

Females age 50-64

- Pap test and HPV test should continue every 5 years or a Pap test every 3 years.
- At age 50, females should get mammograms every 2 years.
- At age 50, females at average risk for colorectal cancer should get screenings.
- At age 55, females with a history of smoking should speak with their doctor about lung cancer screenings.

Females age 65 and older

- Mammograms every 2 years should continue until age 74.
- Colorectal cancer screenings are recommended until age 75. At age 76, speak with your doctor about the need for continued screenings.
- Females with a history of smoking should speak with their doctor about lung cancer screenings until age 80.

Recommendations based on the U.S. Preventive Services Task Force and the American Cancer Society recommendations for cancer screenings.
