

Maternal Mental Health

Wyoming — PRAMS, 2016

Background

Depression is a serious mood disorder that may last for weeks or months at a time. Postpartum depression is depression that occurs after having a baby. Feelings of postpartum depression are more intense and last longer than those of “baby blues,” a term used to describe the worry, sadness, and tiredness many women experience after having a baby.¹

Pregnancy Risk Assessment Monitoring System (PRAMS)

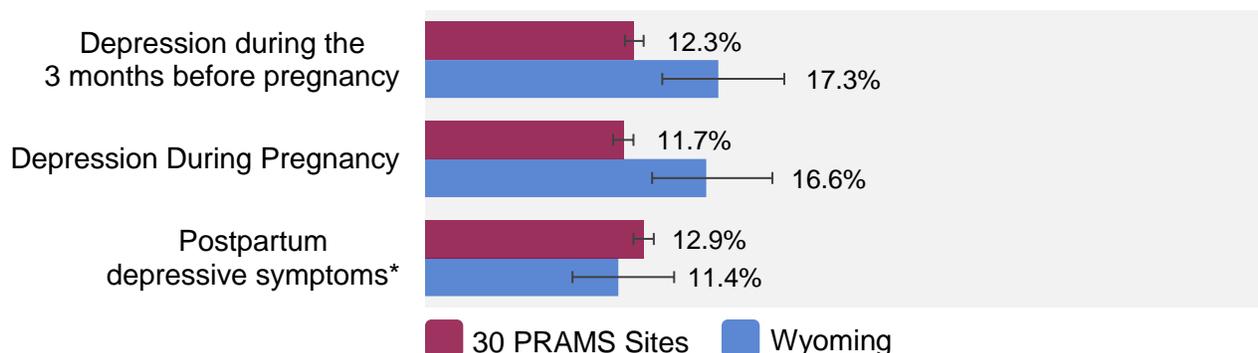

PRAMS collects site-specific, population-based data on maternal attitudes and experiences before, during, and shortly after delivery. PRAMS surveys are typically completed 3 to 6 months after delivery. PRAMS sites that met or exceeded the response rate threshold for 2016 (55%) are included in overall estimates. Results presented in this report include responses to “Core” questions (asked by all PRAMS sites).

Maternal Mental Health National Goal

**Healthy People
2020 Objective²**

MICH-34 – (Developmental) Decrease the proportion of women delivering a live birth who experience postpartum depressive symptoms

Maternal Depression Before, During, and After Pregnancy

*Defined as “always” or “often” feeling down, depressed, or hopeless or having little interest or little pleasure in doing things she usually enjoyed since delivery

Note: Bars display 95% Confidence Intervals

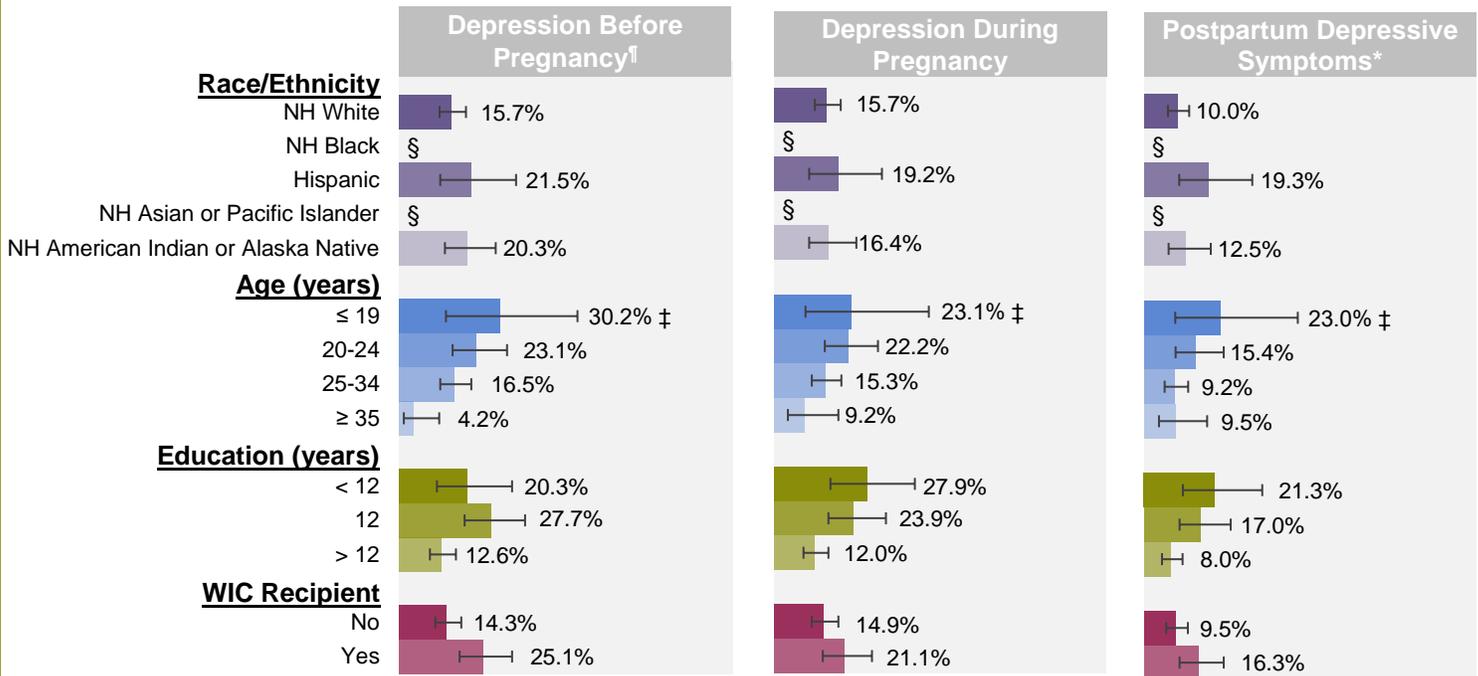

Screening for Depression Among Women Who Had Health Care Visits

PRAMS Indicator	Wyoming 2016 % (95% Confidence Interval)	30 PRAMS Sites 2016 % (95% Confidence Interval) [†]
Asked by a health care worker in the 12 months before pregnancy if feeling down or depressed	47.9 (42.3 – 53.7)	47.1 (46.1 – 48.1)
Asked by a health care worker during a prenatal care visit if feeling down or depressed	70.7 (66.2 – 74.8)	74.3 (73.5 – 75.1)
Asked by a healthcare worker during the postpartum checkup if feeling down or depressed	81.8 (77.6 – 85.3)	82.4 (81.6 – 83.0)

[†] Weighted Percentage (95% Confidence Interval)

Wyoming PRAMS: Maternal Mental Health

Women who reported depression before[¶] or during pregnancy, or postpartum depressive symptoms*, by maternal characteristics — Wyoming, 2016

Abbreviations: NH=Non-Hispanic, WIC = Special Supplemental Nutrition Program for Women, Infants, and Children

*Defined as “always” or “often” feeling down, depressed, or hopeless or having little interest or little pleasure in doing things she usually enjoyed since delivery

¶ 3 months before pregnancy

§ < 30 respondents; not reported

‡ < 60 respondents; may not be reliable

Note: Bars display 95% Confidence Intervals

Summary

Based on results from the estimates for 30 PRAMS sites:

- About one in eight PRAMS respondents reported depression before pregnancy (12.3%), during pregnancy (11.7%), and or postpartum depressive symptoms (12.9%).
- Overall, nearly half of women were screened for depression before pregnancy (47.1%), about three quarters were screened for depression during pregnancy (74.3%), and most were screened for depression after pregnancy (82.4%).
