Executive Summary:

In Wyoming, the Department of Health (WDH) has been designated by the Governor to act as the Lead Agency for accepting Part C of IDEA Federal Funds and to provide oversight of a state-wide Early Intervention System (EIS) that serves children birth to three with disabilities. This state-wide system allocates funds to service providers who are located in different regional geographical areas across the state.

Contracts for Part C Funds

WDH requires each Child Development Center (CDC) complete an application for funds on a biennial basis. These applications are approved and budgets are established for the dissemination of early intervention funds to the CDC. Once the WDH has received the annual grant award notice from OSEP, the following steps are implemented:

- Annual contracts for Part C services are drafted for each regional CDC. Each CDC contract states the specific expectations through contract deliverables in which the CDC will comply with IDEA rules and regulations including meeting staff credentials, following IDEA regulations for Part C services, compliance with on-site monitoring, compliance with corrective action plans, timely reporting of data and any state required training.
- Contracts are signed by the Director of the Department of Health, the Behavioral Health Division Senior Administrator, the Chair of the respective CDC Board of Directors and the Wyoming Attorney General’s office.

General Supervision System:

The Wyoming Department of Health (WDH), Early Intervention and Education Program has designed a general supervision and monitoring system that includes multiple methods to: 1) ensure implementation of IDEA and the accountability of regional programs and their providers; 2) identify and correct non-compliance; 3) facilitate improvement; and 4) support practices that improve results and functional outcomes for all children with disabilities and their families. These methods and strategies are interrelated and, as a whole, ensure that the Child Development Center (CDC) regional programs and their providers are implementing IDEA and improving results for children and their families.

System Components for Ensuring and Enforcing Implementation of IDEA

The WDH ensures and enforces implementation of IDEA through clearly defined expectations in the following:

State Performance Plan/Annual Performance Report (SPP/APR)- Every state is required to have a 6-year plan as an accountability mechanism for the state and regional programs.

Indicators for Monitoring Regional Programs - Wyoming Indicators for Monitoring Regional Programs include most of the SPP/APR Indicators and a few other critical priority indicators identified by the state with the assistance of a stakeholder group. Although the state ensures implementation of all IDEA requirements through a wide range of activities, data is analyzed on an annual basis to monitor all regional programs’ performance on each indicator, identify non-compliance and determine those programs that have the greatest need for improvement.

Wyoming Part C Early Intervention Program Policies and Procedures - Wyoming has developed policies and procedures that describe how the Wyoming Part C Rules are expected to be implemented by regional programs and their service providers.

Inter agency Agreements - The WDH has in place several inter agency agreements that identify the responsibilities of the state agencies in the coordination and implementation of Part C requirements.

Contracts with Regional Programs - The WDH contracts with regional programs for the provision of early intervention services. The provisions of the contract are designed to ensure the accountability of local programs in implementing Part C requirements.
Complaints/Dispute Resolution System - The WDH uses the Part C Complaints/Dispute Resolution System to identify and correct non-compliance in the implementation of IDEA requirements and to address any areas that identify the need for improvement (e.g., policies, procedures, guidelines, written agreements).

Off-site and On-site Monitoring - Wyoming uses a combination of on-site and off-site monitoring activities that are linked or integrated to provide a comprehensive picture of each regional program's level of compliance and results. On-site monitoring occurs on a cyclical basis with each CDC receiving on-site monitoring at least every three (3) years. Off-site monitoring is completed ongoing through the year and data is reviewed for each CDC. Both on-site and off-site monitoring includes reviews of the following:

- Natural Environments
- Timeliness of services
- Transition services
- Child Find
- Parent notification;
- Input into the IFSP process;
- Parent complaint process and
- Overall satisfaction with delivery of services.

The monitoring protocol also includes an extensive review of child records. During on-site monitoring at least 20% of the Part C files are reviewed using this form. Prior to on-site monitoring visits, 100% of files are reviewed electronically to identify potential areas of non-compliance to be investigated on-site.

Contracts for General Supervision Assistance

The following contracts are used to enhance Wyoming's Part C's general supervision system:

- Special Education Automation System (SEAS) – state wide enhanced web-based system to collect all Early Intervention service information using real time data entry reporting
- Data Driven Enterprises - assist the state with data analysis and reporting
- Social/Emotional Services-- each CDC contracts with a Social Emotional Professional to assist with services in this area and to promote professional development for provider staff, as well as, local childcare providers.
- Developmental Preschool and Child Care Center (Region 11) – Early Hearing Detection and Intervention (EHDI) Project, includes professional development components and a database in which hearing and vision screening results are entered and tracked for every child born in Wyoming, as well as, every child that receives a hearing and vision screening at one of the CDCs.

How Components are Connected

- The data systems and monitoring systems are linked through the data verification, desk audits, and on-site monitoring using a web based IFSP and data system.
- Monitoring procedures are inter-connected with all other components as that is the means in which WDH has to assess quality, performance, and compliance of each of the CDCs.

Dispute Resolution

Wyoming Department of Health (WDH) currently has policies and procedures regarding dispute resolution that are specified in the Part C State application. Parental Rights and Procedural Safeguards, which describe the dispute resolution process, are reviewed and provided to parents throughout the year. Any written complaints are submitted to WDH and are investigated within 60 days.
Professional Development System:
The mechanisms the State has in place to ensure that service providers are effectively providing services that improve results for infants and toddlers with disabilities and their families.

Professional Development System
The professional development system is composed of statewide activities and required regional activities. In each regional program application for funding, the regional program is to outline their professional development plan that meets the state’s continuous improvement focus areas. The monitoring system and self-assessment pieces are primarily utilized for compliance; however, WDH has been using these systems to guide TA and training within the state as well to gain a better understanding of each community’s unique needs.

Personnel Development
The WDH supports the development of local and statewide training opportunities aimed at increasing the level of skill for current early childhood personnel, while also working with the higher education system in the state to support the education and development of new personnel.

Stakeholder Involvement:
apply this to all Part C results indicators
The mechanism for soliciting broad stakeholder input on targets in the SPP, including revisions to targets.

Stakeholder Involvement
Targets were reviewed for all results indicators with stakeholder involvement prior to submission the State Performance Plan. These stakeholders include members of the ICC, and other identified stakeholders that included local providers and the public.

The state ICC and other identified stakeholders met to set targets in 2014 for the State Performance Plan (SPP). The state agreed with the targets as recommended by the ICC and other identified stakeholders. Continuing review and approval of the FFY 2017 targets for the SPP was completed by the state ICC and other designated stakeholders. Stakeholders review the SPP targets annually.

General Supervision
The general supervision system for the Wyoming Department of Health (WDH) consists of multiple components. The State Interagency Coordinating Council (ICC) is charged with advising and assisting WDH in its development and implementation of Early Intervention Services throughout the state. The council consists of parents, local parent advocacy organizations, University of Wyoming staff, regional CDC directors, state legislators, public health and other state representatives. These stakeholders provide input and recommendations into state rules and regulations, information identified and reported in the Annual Performance Reports and indicators reported in the State Performance Plan.

Policies
WDH works closely with stakeholders in the development of Part C rules and regulations as well as policies to enforce those rules and regulations.

Stakeholder involvement and input is incorporated into the development of the WDH policies, procedures, initiatives, and systems such as those discussed under data systems, on-site monitoring, desk audits, self-assessment, policies and procedures, personnel development, public reporting, application for funds, surveys, dispute resolution, etc.

Public Reporting
The state’s SPP/APR reports are publically reported using the WDH/EIEP website.

A complete copy of the state’s SPP is posted on the WDH website for public review. This report includes any revisions to the SPP that the State has revised, if needed. The notice of the availability to view this report is provided using state wide public announcements and includes the process to request copies. This public notice also includes ways for the public to provide input on the SPP targets.
Reporting to the Public:

How and where the State reported to the public on the FFY 2016 performance of each EIS Program or Provider located in the State on the targets in the SPP/APR as soon as practicable, but no later than 120 days following the State’s submission of its FFY 2016 APR, as required by 34 CFR §303.702(b)(1)(i)(A); and a description of where, on its Web site, a complete copy of the State’s SPP, including any revision if the State has revised the SPP that it submitted with its FFY 2016 APR in 2018, is available.

Public Reporting

WDH reported the FFY 2016 APR and the individual EIS Program Performance information to the WDH website.

Individual EIS Program Performance information includes the state's performance on SPP/APR indicators and each individual EIS programs' performance on the targets in the SPP/APR. The EIS performance report is published as soon as practicable but no later than 120 days from the state's submission of it's FFY 2016 APR. The notice of the availability to view this report is provided using state wide public announcements and includes the process to request copies.

A complete copy of the state's SPP is posted on the WDH website for public review. This report includes any revisions to the SPP that the State has revised, if needed. The notice of the availability to view this report is provided using state wide public announcements and includes the process to request copies.

The WDH Part C Information website address is the following:

Actions required in FFY 2016 response

No APR attachments found.
## Indicator 1: Timely provision of services

### Historical Data and Targets

**Baseline Data:** 2005

**Monitoring Priority:** Early Intervention Services in Natural Environments

**Compliance indicator:** Percent of infants and toddlers with Individual Family Service Plans (IFSPs) who receive the early intervention services on their IFSPs in a timely manner.

(20 U.S.C. 1416(a)(3)(A) and 1442)

<td>100%</td>
<td>100%</td>
<td>99.39%</td>
<td>Did Not Meet Target</td>
<td>Slippage</td>
</tr>
</tbody>
</table>

**Reasons for Slippage**

In the sample provided for this indicator, 163 files were reviewed. Out of the 163 files, 162 files were considered to be in compliance for timely provision of delivering services. One file was delayed by eleven days due to the provider. However, the services were delivered within forty-one (41) days after the parent consented for services, and the provider who documented this non-compliance was notified by the state and is currently implementing this provision at 100% after review by the WDH, Early Intervention and Education Program (EIEP) of subsequent data.

All programs are monitored for provision of timely delivery of services on an ongoing basis using the statewide electronic data system.

</tbody>
</table>

**What is the source of the data provided for this indicator?**

- State monitoring
- State database

**Describe the method used to select EIS programs for monitoring.**

Wyoming uses a monitoring approach to report on this indicator. All statewide services are delivered through regional child development centers (CDC) who employ service providers that cover a geographical area of the state. All service providers complete a self-assessment from their caseload of ten (10) files or 10% of all IFSPs completed during the FFY 2017 reporting timeline (July 1, 2017, to June 30, 2018).
Indicator 1: Timely provision of services

Monitoring Priority: Early Intervention Services in Natural Environments

Compliance indicator: Percent of infants and toddlers with Individual Family Service Plans (IFSPs) who receive the early intervention services on their IFSPs in a timely manner.

(20 U.S.C. 1416(a)(3)(A) and 1442)

<table>

### Targets: Description of Stakeholder Input

In July 2014 the State’s ICC met to discuss targets for the State Performance Plan (SPP).

Stakeholders reviewed past APR performance data for this indicator with the assistance of a contractor who advised the ICC on appropriate targets for growth. The stakeholders reviewed this information and advised the Wyoming Department of Health on targets for the next five years. Stakeholders review the APR Performance Targets annually.
Monitoring Priority: Early Intervention Services in Natural Environments

Results indicator: Percent of infants and toddlers with IFSPs who primarily receive early intervention services in the home or community-based settings.

(20 U.S.C. 1416(a)(3)(A) and 1442)

Indicator 3: Early Childhood Outcomes

Historical Data and Targets

Monitoring Priority: Early Intervention Services in Natural Environments

Results indicator: Percent of infants and toddlers with IFSPs who demonstrate improved:

A. Positive social-emotional skills (including social relationships);
B. Acquisition and use of knowledge and skills (including early language/communication); and
C. Use of appropriate behaviors to meet their needs.

(20 U.S.C. 1416(a)(3)(A) and 1442)

Does your State’s Part C eligibility criteria include infants and toddlers who are at risk of having substantial developmental delays (or “at-risk infants and toddlers”) under IDEA section 632(5)(B)(i)?

No

In July 2014, the state ICC met with the Behavioral Health Division to review the past performance and future target proposals based on the historical performance of Indicator 3/Child Outcomes. The stakeholders proposed to increase the performance for the following sub-indicators as follows:

Indicator 3 A Statement 1- Increase the performance total gain from the 2008 baseline by 2.00%.
Indicator 3 A Statement 2- Increase the performance total gain from the 2008 baseline by 4.00%. Focus of the SIMR outlined in Indicator 11.
Indicator 3 B Statement 1- Increase the performance total gain from the 2008 baseline by 2.00%.
Indicator 3 B Statement 2- Increase the performance total gain from the 2008 baseline by 2.00%.
Indicator 3 C Statement 1- Increase the performance total gain from the 2008 baseline by 2.00%.
Indicator 3 C Statement 2- Increase the performance total gain from the 2008 baseline by 2.00%.
**Indicator 3: Early Childhood Outcomes**

**FFY 2017 Data**

**Monitoring Priority:** Early Intervention Services in Natural Environments

**Results Indicator:** Percent of infants and toddlers with IFSPs who demonstrate improved:

A. Positive social-emotional skills (including social relationships);
B. Acquisition and use of knowledge and skills (including early language/communication); and
C. Use of appropriate behaviors to meet their needs.

(20 U.S.C. 1416(a)(3)(A) and 1442)

<td>167</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Please note that this data about the number of infants and toddlers who did not receive early intervention services for at least six months before exiting the Part C program is optional in this FFY16 submission. It will be required in the FFY17 submission.

Was sampling used?  No

Did you use the Early Childhood Outcomes Center (ECO) Child Outcomes Summary (COS) process?  No

Provide the criteria for defining “comparable to same-aged peers.”

“Comparable to same-aged peers” is defined as a z-score on the Battelle Developmental Inventory-Second Edition (BDI-2) of -1.30 or higher.

List the instruments and procedures used to gather data for this indicator.

In 2015-16, the EIEP analyzed Child Outcome Summary (COS) and other testing data. It was determined at that time the state should provide for a standardized assessment process for child outcome reporting.

In FFY 2016-17 the state implemented a new process for reporting performance for this indicator by the using Battelle Developmental Inventory-Second Edition (BDI-2). The BDI-2 was used for both entry and exit child outcome reporting.

Prior to the use of the BDI-2, the list of state-approved tools consisted of many different assessment tools (FFY 2009-2016). The approved tools are listed below:

- Battelle Developmental Inventory
- Early Learning Accomplishment Profile
- Hawaii Early Learning Profile
- Bayley Scales of Infant Development (BSID-II)
- Brigance

In FFY 2016, through stakeholder input, three (3) programs piloted a new process of utilizing one tool, the BDI-2, for reporting on skill levels of a child at entry into the Part C program and then again at exit. After reviewing the process, and again with stakeholder input, the state implemented this process with the rest of the programs during FFY2017. The state completed ongoing analysis of the process and reviewed data trends for any anomalies in reporting.

All programs across the state are now completing the BDI-2 for entry and exit reporting on skill levels in all five domains. This new process ensures a reliable and valid standard process for assessing a child on the three outcomes areas.

Provide additional information about this indicator (optional)
Monitoring Priority: Early Intervention Services in Natural Environments

Results indicator: Percent of infants and toddlers with IFSPs who demonstrate improved:

A. Positive social-emotional skills (including social relationships);
B. Acquisition and use of knowledge and skills (including early language/communication); and
C. Use of appropriate behaviors to meet their needs.

(20 U.S.C. 1416(a)(3)(A) and 1442)

Was sampling used? Yes
Was a collection tool used? Yes
Is it a new or revised collection tool? No

The demographics of the families responding are representative of the demographics of infants, toddlers, and families enrolled in the Part C program. Yes

Include the State’s analysis of the extent to which the demographics of the families responding are representative of the demographics of infants, toddlers, and families enrolled in the Part C program.

In FFY 2017, surveys were distributed to parents/caregivers whose child had been enrolled in Part C services during the reporting timeline. Parents could also respond via a paper survey when requested. A total of 404 family surveys were completed state-wide; the fall child count was 1,205 children. Thus, the response rate was 33.53%.

The representativeness of the surveys was assessed by examining the demographic characteristics of the children's parents/caregivers who responded to the survey to all Part C children demographics characteristics who were receiving services. This comparison indicates the results are generally representative (1) by geographic region where the child receives services; and (2) by the age of the child. However, parents of white children are slightly more likely to respond to the survey than parents of children of other race/ethnicity's. Eighty-five percent (85%) of the Part C family members who returned a survey indicated that their children's race/ethnicity is white. In 2018-19, the state will work with CDC regional providers to determine how each region can increase the response rate of parents who are Hispanic. The state has provided guidance to providers on providing IFSP essential information to be written in Spanish when provided to the Spanish speaking families, in addition to having interpreters at the meetings to translate verbally what is being discussed. The state anticipates more Hispanic families will be immersed in the IFSP process and be willing to provide feedback to providers using the family outcome survey. This family survey is provided in both English and Spanish using a Survey Monkey link. It is also available in paper form for families that do not have access to the survey site.
Indicator 4: Family Involvement

Required Actions from FFY 2016

Monitoring Priority: Early Intervention Services In Natural Environments

Results Indicator: Percent of families participating in Part C who report that early intervention services have helped the family:

A. Know their rights;

### Targets: Description of Stakeholder Input

In July 2014 the State's ICC met to discuss targets for the State Performance Plan (SPP).

Stakeholders reviewed past APR performance data for this indicator with the assistance of a contractor who advised the ICC on appropriate targets for growth. The stakeholders reviewed this information and advised the Wyoming Department of Health on targets for the next five years. This was still in effect for FFY 2017 reporting for this indicator target. Stakeholders continue to review the performance target for this indicator annually.
Indicator 5: Child Find (Birth to One)

Monitoring Priority: Effective General Supervision Part C / Child Find

| 62 |

What is the source of the data provided for this indicator?

- State monitoring
- State database

Provide the time period in which the data were collected (e.g., September through December, fourth quarter, selection from the full reporting period).

July 1 2017 through June 30 2018 for the full reporting period.

Describe how the data accurately reflect data for infants and toddlers with IFSPs for the full reporting period.

This data accurately reflects 100% of the initial IFSPs from referral to the initial IFSP meeting (excluding children with extenuating family circumstances) and therefore reflects 100% of the population of infants and toddlers who were referred, evaluated and had an IFSP meeting.

The Wyoming Department of Health (WDH) Part C database is a web-based system that was specifically developed to collect and track data on the participation of infants and toddlers with disabilities and their families. The system captures data in the monitoring priority areas identified by the WDH and the Office of Special Education Programs. Data collected at referral and the Individual Family Service Plans (IFSP) for every eligible child and family is entered into the database by local staff. The WDH and the local service providers generate reports on a regular basis to monitor compliance and performance and audit for data validity and reliability.

Provide additional information about this indicator (optional)

**FFY 2016 Findings of Noncompliance Verified as Corrected**

Describe how the State verified that the source of noncompliance is correctly implementing the regulatory requirements.

This data accurately reflects 100% of the initial IFSPs from referral to the initial IFSP meeting (excluding children with extenuating family circumstances) and therefore reflects 100% of the population of infants and toddlers who were referred, evaluated and had an IFSP meeting. The WDH Part C database is a web-based system that was specifically developed to collect and track data on the participation of infants and toddlers with disabilities and their families in the monitoring priority areas identified by the WDH and the Office of Special Education Programs. Data collected at referral and the Individual Family Service Plans (IFSP) for every eligible child and family is entered into the database by local staff. The WDH and the local service providers generate reports on a regular basis to monitor compliance and performance and perform audits for data validity and reliability.

All sixteen files that did not meet the compliance timeline for Indicator 7 did document an IFSP meeting date even though it was more than 45 days from the referral date. Through subsequent analysis of data trends, the Lead Agency was able to verify that the programs identified for non-compliance were correctly implementing the regulatory requirements. The programs had demonstrated 100% compliance correctly implementing the regulatory requirement. No further non-compliance was documented during this analysis of subsequent data.

Describe how the State verified that each individual case of noncompliance was corrected.

The state verified that each case of non-compliance was corrected using the state wide database system. This system documents all IFSP activities of children enrolled in the Part C program. All child files that did not meet the time line and were still in the jurisdiction of the program had documented an IFSP meeting date. The review also included the IFSP services, all prior written notices associated with meetings held for the family and other required activities of the IFSP process. This state wide data system, which reports real time data, also was used to monitor newly referred child files and to review data trends that indicated compliance for the "45-day" time line. All demographic information is included in this data system along with all activities associated with the initial and ongoing processes of the IFSP regulatory requirements.

<tr>
<td>Indicator 8</td>
<td>11/14/2018</td>
<td>Number of toddlers with disabilities exiting Part C</td>
<td>1,056</td>
<td>542</td>
</tr>
</tbody>
</table>

Explanation of Alternate Data

The exit number of 1056 is the total number of children who exited services between the dates of July 1, 2017, and June 30, 2018. The number of children who needed to have a transition plan is 542. This includes children with these exit codes:

- 413 Part B Eligible, exiting Part C
- 55 not eligible for Part B, exit with referrals to other programs
- 68 not eligible for Part B, exit with no referral
- 6 Part B, eligibility not determined

Of these 542, 25 had a late transition plan. However, 15 of these were due to exceptional family services. Thus, ten (10) children did not have a timely transition plan. The WDH provided technical assistance to the regional CDC providers of these ten (10) children to ensure full comprehension of the requirements.

Data include only those toddlers with disabilities exiting Part C with timely transition planning for whom the Lead Agency has developed an IFSP with transition steps and services at least 90 days, and at the discretion of all parties, not more than nine months, prior to the toddler’s third birthday.

FFY 2016 Findings of Noncompliance Verified as Corrected

Describe how the State verified that the source of noncompliance is correctly implementing the regulatory requirements

The WDH verified that the CDC regional programs are correctly implementing the specific regulatory requirement through data submissions and file reviews. The WDH verified correction of noncompliance for this indicator by monitoring the identified EIS program with noncompliance for its implementation that:
1. is correctly implementing this regulation requirement based on a review of updated data such as data subsequently collected through on-site monitoring or the State’s data system; and
2. has developed an IFSP with transition steps and services for each child, unless the child is no longer within the jurisdiction of the EIS program (i.e., the child has exited the state’s Part C program due to age or other reasons), consistent with OSEP’s Memo 09-02. All exits that were out of compliance were corrected for the FFY 2016 by documenting the transition plan date (even though late) in the enhanced data system and through review of subsequent data.

Describe how the State verified that each individual case of noncompliance was corrected

Subsequent data was reviewed when the program had reported on any transition activities for timeliness.

Because the state reported less than 100% compliance for FFY 2016, the state must report on the status of correction of noncompliance identified in FFY 2017 for this indicator. When reporting on the correction of noncompliance, the state must report in its FFY 2017 APR, that it has verified that each EIS program or provider with noncompliance identified in FFY 2016 for this indicator:
1. is correctly implementing the specific regulatory requirements (i.e., achieved 100% compliance) based on a review of updated data such as data subsequently collected through on-site monitoring or a State data system; and
2. has corrected each individual case of noncompliance, unless the child is no longer within the jurisdiction of the EIS program or provider, consistent with OSEP Memo 09-02. In the FFY 2017 APR, the State must describe the specific actions that were taken to verify the correction.

Data collected at referral and from Individual Family Service Plans (IFSP) for every eligible child and family is entered into the database by local staff. The WDH and the regional CDC providers generate reports on a regular basis to monitor compliance and performance and audit for data validity and reliability. All six files that were out of compliance for FFY 2016 have been corrected by documenting the transition plan date (even though late) in the enhanced data system for the individual files out of compliance (i.e., achieved 100% compliance). The EIS providers who were out of compliance for the FFY 2016 APR for this indicator were verified to be correctly implementing the timely transition plan with steps and service requirements based on a review of subsequently collected data through on-site monitoring and off-site file reviews that were conducted periodically.

Compliance indicator: The percentage of toddlers with disabilities exiting Part C with timely transition planning for whom the Lead Agency has:

A. Developed an IFSP with transition steps and services at least 90 days, and at the discretion of all parties, not more than nine months, prior to the toddler’s third birthday;
B. Notified (consistent with any opt-out policy adopted by the State) the State educational agency (SEA) and the local educational agency (LEA) where the toddler resides at least 90 days prior to the toddler’s third birthday for toddlers potentially eligible for Part B preschool services; and
C. Conducted the transition conference held with the approval of the family at least 90 days, and at the discretion of all parties, not more than nine months, prior to the toddler’s third birthday for toddlers potentially eligible for Part B preschool services.

(20 U.S.C. 1416(a)(3)(B) and 1442)

Monitoring Priority: Effective General Supervision Part C / Effective Transition

Compliance indicator: The percentage of toddlers with disabilities exiting Part C with timely transition planning for whom the Lead Agency has:

A. Developed an IFSP with transition steps and services at least 90 days, and at the discretion of all parties, not more than nine months, prior to the toddler’s third birthday;
B. Notified (consistent with any opt-out policy adopted by the State) the State educational agency (SEA) and the local educational agency (LEA) where the toddler resides at least 90 days prior to the toddler’s third birthday for toddlers potentially eligible for Part B preschool services; and
C. Conducted the transition conference held with the approval of the family at least 90 days, and at the discretion of all parties, not more than nine months, prior to the toddler’s third birthday for toddlers potentially eligible for Part B preschool services.

(20 U.S.C. 1416(a)(3)(B) and 1442)
Of the 542 children who had transition plans, 55 were not eligible for Part B but had exits with referrals to other programs, 68 were not eligible for Part B and had no referrals, and 6 did not have eligibility determined.

542-55-68-6=413.

These are the students for whom a transition conference was established.

Data reflect only those toddlers for whom the Lead Agency has conducted the transition conference held with the approval of the family at least 90 days, and at the discretion of all parties, not more than nine months, prior to the toddler’s third birthday for toddlers potentially eligible for Part B preschool services.

Reasons for Slippage

In FFY 2017, 16 files were out of compliance. Of this number, three files were less than 12 days short of the 90-day timeline. All 16 non-compliance files did document that a transition conference was held, even though it was late.

To ensure all regional CDC programs are informed of the regulations, the WDH has developed webinars to provide more guidance on the IDEA requirements and to timely and accurately report in the statewide data system. Programs who have not met this requirement are notified of the noncompliance and are required to take these webinars. Ongoing monitoring has also been directed to all family service coordinators to provide regular monitoring of IFSP deadlines and to alert teams of impending deadlines. The WDH anticipates this will provide correction to practices for FFY 2018 in order to reach 100% compliance.

What is the source of the data provided for this indicator?

- State monitoring
- State database

Provide the time period in which the data were collected (e.g., September through December, fourth quarter, selection from the full reporting period).

The time period of this data analysis was from July 1 2017 to June 30 2018.

Describe how the data accurately reflect data for infants and toddlers with IFSPs for the full reporting period.

Given that the data is based on 100% of the children in the Part C program for the entire year, it is representative. This data represents the entire census of Part C children who exited during the full reporting period.

**Correction of Findings of Noncompliance Identified in FFY 2016**

**Findings of Noncompliance Verified as Corrected**

describe how the state verified that the source of noncompliance is correctly implementing the regulatory requirements.

Subsequent data was analyzed to assure that the regional CDC providers were correctly implementing the regulatory requirements. This data, which includes 100% of all children who exited services, was analyzed before determining the local providers’ performance in implementing Part C IDEA services for FFY 2016. All child files with noncompliance in meeting the transition conference timeline when indicated were given notice of the noncompliance. All files determined to not meet the timeline were reviewed for correction and all completed the transition conference, even though late. Data continues to be analyzed to assure that the regional CDC providers are correctly implementing the regulatory requirements for future transition conferences.

Description of Measure

Submitted in Phase I

Targets: Description of Stakeholder Input

Submitted in Phase I

Overview
Monitoring Priority: General Supervision

Results indicator: The State’s SPP/APR includes a State Systemic Improvement Plan (SSIP) that meets the requirements set forth for this indicator.

Data Analysis

A description of how the State identified and analyzed key data, including data from SPP/APR indicators, 618 data collections, and other available data as applicable, to: (1) select the State-identified Measurable Result(s) for Infants and Toddlers with Disabilities and their Families, and (2) identify root causes contributing to low performance. The description must include information about how the data were disaggregated by multiple variables (e.g., EIS program and/or EIS provider, geographic region, race/ethnicity, socioeconomic status, gender, etc.) As part of its data analysis, the State should also consider compliance data and whether those data present potential barriers to improvement. In addition, if the State identifies any concerns about the quality of the data, the description must include how the State will address these concerns. Finally, if additional data are needed, the description should include the methods and timelines to collect and analyze the additional data.

Submitted in Phase I
## Analysis of State Infrastructure to Support Improvement and Build Capacity

A description of how the State analyzed the capacity of its current infrastructure to support improvement and build capacity in EIS programs and/or EIS providers to implement, scale up, and sustain the use of evidence-based practices to improve results for infants and toddlers with disabilities and their families. State systems that make up its infrastructure include, at a minimum: governance, fiscal, quality standards, professional development, data, technical assistance, and accountability/monitoring. The description must include current strengths of the systems, the extent the systems are coordinated, and areas for improvement of functioning within and across the systems. The State must also identify current State-level improvement plans and other early learning initiatives, such as Race to the Top-Early Learning Challenge and the Home Visiting program and describe the extent that these new initiatives are aligned, and how they are, or could be, integrated with, the SSIP. Finally, the State should identify representatives (e.g., offices, agencies, positions, individuals, and other stakeholders) that were involved in developing Phase I of the SSIP and that will be involved in developing and implementing Phase II of the SSIP.

### Submitted in Phase I
State-identified Measurable Result(s) for Infants and Toddlers with Disabilities and Their Families

A statement of the result(s) the State intends to achieve through the implementation of the SSIP: The State-identified Measurable Result(s) for Infants and Toddlers with Disabilities and their Families must be aligned to an SPP/APR indicator or a component of an SPP/APR indicator. The State-identified Measurable Result(s) for Infants and Toddlers with Disabilities and their Families must be clearly based on the Data and State Infrastructure Analyses and must be a child- or family-level outcome in contrast to a process outcome. The State may select a single result (e.g., increase the rate of growth in infants and toddlers demonstrating positive social-emotional skills) or a cluster of related results (e.g., increase the percentage reported under child outcome B under Indicator 3 of the SPP/APR (knowledge and skills) and increase the percentage trend reported for families under Indicator 4 (helping their child develop and learn)).

Statement

State-identified Measurable Results (SiMR): Increase the percentage of infants and toddlers in the pilot region who exit the Part C Program demonstrating age-appropriate positive social-emotional skills by 4.0 percentage points over a period of five years.

Description

The SIMR is a child-level outcome, based on Indicator 3a, Summary Statement 2. Improving results in the pilot region has the potential to generate the highest leverage for improving outcomes/results for children with disabilities and their families across the State. The implementation strategies are designed for the children with disabilities and their families to experience in their natural environments by providing evidence based resources coupled with training and mentoring/coaching activities.
**Monitoring Priority: General Supervision**

**Results indicator:** The State’s SPP/APR includes a State Systemic Improvement Plan (SSIP) that meets the requirements set forth for this indicator.

### Selection of Coherent Improvement Strategies

An explanation of how the improvement strategies were selected, and why they are sound, logical and aligned, and will lead to a measurable improvement in the State-identified Measurable Result(s) for Infants and Toddlers with Disabilities and their Families. The improvement strategies should include the strategies, identified through the Data and State Infrastructure Analyses, that are needed to improve the State infrastructure and to support EIS program and/or EIS provider implementation of evidence-based practices to improve the State-identified result(s) for infants and toddlers with disabilities and their families. The State must describe how implementation of the improvement strategies will address identified root causes for low performance and ultimately build EIS program and/or EIS provider capacity to achieve the State-identified Measurable Result(s) for Infants and Toddlers with Disabilities and their Families.

### Coherent Improvement Strategies (updated 2016)

The Early Intervention and Education Program (EIEP) will implement four strands of action in order to meet the SIMR.

1. **Professional Development (PD)**
   
   The EIEP will implement a Professional Development system that increases providers’ knowledge and skills in the area of infant and toddler’s social-emotional development.

2. **Evidence-Based Practices (EBP)**
   
   The EIEP will establish a toolbox of and provide targeted training on evidence-based practices surrounding social-emotional development and functional outcomes for providers to use with children ages birth to three and their families.

3. **Parent Support and Engagement (PSE)**
   
   The EIEP will develop and implements a process to increase family capacity to support their child’s social-emotional development.

4. **Data Quality (DQ)**
   
   The EIEP Program will develop a standardized and quality child outcome measurement process.

**See Attachments**
Theory of Action

A graphic illustration that shows the rationale of how implementing the coherent set of improvement strategies selected will increase the State’s capacity to lead meaningful change in EIS programs and/or EIS providers, and achieve improvement in the State-identified Measurable Result(s) for Infants and Toddlers with Disabilities and their Families.

Submitted Theory of Action: No Theory of Action Submitted

Provide a description of the provided graphic illustration (optional)

Description of Illustration

The entire SSIP process began with the belief that the ability of infants and toddlers to manage their behaviors and develop meaningful relationships is the very basis for success in not only the academic world, but in life itself. This belief is held by parents, providers, and people in leadership and government roles involved in the IDEA Part C program.

Pilot Program:

Because the improvement strategies are based on information gleaned during the data and infrastructure analysis and are evidence based, it is the belief that these activities will improve results for social/emotional outcomes in SCCDC Region 7. The strategies contain a training/coaching model for parents as well as providers which are critical in implementing with fidelity these strategies. Additionally, the State infrastructure is posed and able to support these strategies, both financially, and by leveraging support/resources from other agencies within the State.

Once these improvement strategies have been evaluated and determined to be successful, they will be scaled-up across the State by creating and sustaining organizational and systems environments for effective implementation in all Regions. Continuous improvement cycles will inform people through all levels of the system, from State staff to Regional leaders, to providers, and to parents.

All this effectively leads to the ultimate “then” of the Theory of Action: the improvement of social/emotional health of infants and toddlers statewide.

The TOA was revised during the development of Phase II in order to better accommodate the Evaluation Plan that was submitted for this Phase of SSIP. The ultimate goal of the TOA has not changed.

See Attachments
Indicator 11: State Systemic Improvement Plan

Monitoring Priority: General Supervision

Results indicator: The State’s SPP/APR includes a State Systemic Improvement Plan (SSIP) that meets the requirements set forth for this indicator.

**Infrastructure Development**

(a) Specify improvements that will be made to the State infrastructure to better support EIS programs and providers to implement and scale up EBPs to improve results for infants and toddlers with disabilities and their families.

(b) Identify the steps the State will take to further align and leverage current improvement plans and other early learning initiatives and programs in the State, including Race to the Top-Early Learning Challenge, Home Visiting Program, Early Head Start and others which impact infants and toddlers with disabilities and their families.

(c) Identify who will be in charge of implementing the changes to infrastructure, resources needed, expected outcomes, and timelines for completing improvement efforts.

(d) Specify how the State will involve multiple offices within the State Lead Agency, as well as other State agencies and stakeholders in the improvement of its infrastructure.

**Infrastructure Development:**

States must specify improvements that will be made to the State infrastructure to better support EIS programs.

Wyoming has completed the following to its infrastructure:

- One region was identified to pilot a home visiting curriculum to improve SE skills for parent/caregiver for FFY 2016 to FFY 2017
- Train pilot region and one other regional Part C program on Mothers and Babies (MB) Curriculum in addition to the Parent As Teachers (PAT) state staff and the local providers
- Provide ongoing coaching for regions and PAT staff for delivering MB curriculum
- Implement MB with one family for initial implementation during coaching stage in order to get family specific coaching for the initial implementation of the home visiting curriculum before scaling up to region wide serve delivery

Wyoming has assessed its capacity of the current infrastructure in order to increase the capacity of the EI programs and providers to implement, scale up and sustain evidence-based practices that will result in improved outcomes for infants and toddler with disabilities and their families. The MB curriculum was one aspect that was implemented in a pilot region and one other region of the state to test its theory of improving the outcomes for positive social emotional skills of the children served due to this assessment of current practices. Currently the pilot region did not have a systemic approach to addressing positive social emotional skill building for the families it served.

The steps the State took to further align and leverage current improvement plans and other early learning initiatives and programs in the State, including Home Visiting Program, Early Head Start and others which impact infants and toddlers with disabilities and their families was to gather the input from the following stakeholders on the present services offered in the statewide system in the area of positive social emotional skill building for the child and family:

**Data Analysis**

- Data Sources identified to inform the committee for the SSIP
  - Kids Count
  - Mental Health Unit
  - Parents as Teachers (PAT) Needs Assessment
  - EHDI (Early Hearing Detection and Intervention)
  - Late on set Hearing Loss
  - Vision Loss
  - Rate in Prison Population
  - DFS (Department of Family Services)
  - Rate in Foster Care

The SSIP committee approved the Mothers and Babies Home Visiting Curriculum to address the deficiencies identified during the data analysis. This home visiting curriculum had imbedded within its content many evidence based practices that the SSIP Committee wanted reinforced. Other strategies were also identified along with this curriculum such as:

- Pilot new data collection process for child outcome performance within 3 pilot regions
- Survey Parent/caregiver on SE Development knowledge for baseline in pilot
- Survey providers for baseline on Social Emotional Development knowledge for baseline in pilot
- Survey Parent/caregiver knowledge on SE Development to gauge growth
Support for EIS programs and providers Implementation of Evidence-Based Practices

(a) Specify how the State will support EIS providers in implementing the evidence-based practices that will result in changes in Lead Agency, EIS program, and EIS provider practices to achieve the SIMR(s) for infants and toddlers with disabilities and their families.

(b) Identify steps and specific activities needed to implement the coherent improvement strategies, including communication strategies and stakeholder involvement; how identified barriers will be addressed; who will be in charge of implementing; how the activities will be implemented with fidelity; the resources that will be used to implement them; and timelines for completion.

(c) Specify how the State will involve multiple offices within the Lead Agency (and other State agencies such as the SEA) to support EIS providers in scaling up and sustaining the implementation of the evidence-based practices once they have been implemented with fidelity.

- Train pilot region and one other regional Part C program on Mothers and Babies (MB) Curriculum
- Provide ongoing coaching for regions delivering MB curriculum
- Pilot new data collection process for child outcome performance within 3 pilot regions using an anchor tool (BDI-2) in order to better inform the Child Outcome Ratings for inter-rater reliability.

Evaluation

(a) Specify how the evaluation is aligned to the theory of action and other components of the SSIP and the extent to which it includes short-term and long-term objectives to measure implementation of the SSIP and its impact on achieving measurable improvement in SIMR(s) for infants and toddlers with disabilities and their families.

(b) Specify how the evaluation includes stakeholders and how information from the evaluation will be disseminated to stakeholders.

(c) Specify the methods that the State will use to collect and analyze data to evaluate implementation and outcomes of the SSIP and the progress toward achieving intended improvements in the SIMR(s).

(d) Specify how the State will use the evaluation data to examine the effectiveness of the implementation; assess the State’s progress toward achieving intended improvements; and to make modifications to the SSIP as necessary.

- Specify how the evaluation is aligned to the theory of action and other components of the SSIP and the extent to which it includes short-term and long-term objectives to measure implementation of the SSIP and its impact on achieving measurable improvement in SIMR(s) for infants and toddlers with disabilities and their families.

- Specify how the evaluation includes stakeholders and how information from the evaluation will be disseminated to stakeholders.

- Specify the methods that the State will use to collect and analyze data to evaluate implementation and outcomes of the SSIP and the progress toward achieving intended improvements in the SIMR(s).

- Specify how the State will use the evaluation data to examine the effectiveness of the implementation; assess the State’s progress toward achieving intended improvements; and to make modifications to the SSIP as necessary.

Technical Assistance and Support

Describe the support the State needs to develop and implement an effective SSIP. Areas to consider include: Infrastructure development; Support for EIS programs and providers implementation of EBP; Evaluation; and Stakeholder involvement in Phase II.

Describe the support the State needs to develop and implement an effective SSIP.
Phase III submissions should include:

- Data-based justifications for any changes in implementation activities.
- Data to support that the State is on the right path, if no adjustments are being proposed.
- Descriptions of how stakeholders have been involved, including in decision-making.

A. Summary of Phase 3

1. Theory of action or logic model for the SSIP, including the SiMR.
2. The coherent improvement strategies or principle activities employed during the year, including infrastructure improvement strategies.
3. The specific evidence-based practices that have been implemented to date.
4. Brief overview of the year’s evaluation activities, measures, and outcomes.
5. Highlights of changes to implementation and improvement strategies.

A1. Theory of action or logic model for the SSIP, including the SiMR.

The State Identified Measurable Result (SiMR) of the Wyoming Department of Health (WDH) Early Intervention and Education Program (EIEP) indicates that the percentage of infants and toddlers who exit the Part C Program services demonstrating:

**Increase the percentage of infants and toddlers who exit the Part C Program services demonstrating age-appropriate positive social-emotional skills by 4.0% over a period of 5 years.**

As discussed in Phase I and Phase II, the EIEP and its stakeholders developed a Theory of Action (see the attachment: WYCTOAMarch17.docx.pdf) that describes four broad Standards of Action as follows:

**Theory of Action**

**Professional Development**

Implements a Professional Development system that increases providers’ knowledge and skills in the area of infant and toddler’s social-emotional development.

- EI providers will have increased knowledge to support positive social-emotional development for children ages birth to three and their families.
- The professional development system will have embedded social-emotional evidence-based practices.
- EI providers will implement new skills surrounding social-emotional development when working with families.
- Improvements in social-emotional practices will be sustainable.

**Evidence-Based Practices**

Establishes a toolbox of evidence-based practices surrounding social-emotional development and functional outcomes for providers to use with children ages birth to three and their families.

- EI providers will select evidence-based practices when delivering services related to positive social-emotional development.
- EI providers will implement evidence-based practices when delivering services related to positive social emotional development.
- EI providers will consistently identify and include family outcomes that are designed to enhance social-emotional outcomes in the IFSP.

**Parent Support and Engagement**

Develops and implements a process to increase family capacity to support their child’s social-emotional development.

- Parents will have appropriate expectations for social-emotional development.
- Parents will have increased knowledge surrounding their child’s social-emotional development.
- Parents will gain strategies to address their child’s social-emotional needs.
- Families will have the necessary skills and resources to help their child’s social-emotional development.
- Families will have the skills to participate in the IFSP development process.
- Families will use new strategies to address their child’s social-emotional needs.
- IFSPs will include more appropriate child and family outcomes that address social-emotional outcomes.

**Data Quality**

Develops a standardized and quality childhood outcome measurement process.

- All EI providers will follow the same procedures for measuring child outcomes.
- Child outcomes data will be more valid and reliable.
- EI providers will review and use child-level data to determine if children are making sufficient progress in their early intervention.
The coherent improvement strategies or principle activities employed during the year, including infrastructure improvement strategies.

The EIEP Part C program implemented the following activities in 2015 and 2016.

Professional Development

- Implemented a Professional Development system that increased providers’ knowledge and skills in the area of infant and toddler’s social-emotional development (training occurred in April 2016 with ongoing coaching) by:
  - Providing training to providers from two regions on the Mothers and Babies Curriculum.
- The completed training provided for the EI providers to increased knowledge to support positive social-emotional development for children ages birth to three and provide their families with more targeted support by:
  - Provided through the implementation of the curriculum and the ongoing coaching by the trainer/author, the EI providers in the pilot programs have increased their skills surrounding social-emotional development when working with families.
- The professional development system (for two regions) embedded social-emotional evidence-based practices delivered during the home visitation services along with coaching from trainer (infrastructure) by:
  - Provided two trainings on functional evaluation at the state-wide conference put on by Wyoming Department of Education.
  - Provided one training on functional evaluation in March 2017 and have planned four more.
  - Provided training to CDC region providers on stressors on families and children as part of the Project ECHO Early Childhood network (Dr. Tandon who delivered the Mothers and Babies curriculum, delivered this training.)
  - Conducted a state wide provider survey to determine the training needs of providers surrounding social-emotional development, IFSPs, and functional outcomes.
  - Developed a new process for improving the quality of the child outcomes ratings systems.
  - Hired a trainer for the ASQ-SE.
  - Administered a state wide needs assessment to providers to determine state wide training needs regarding IFSPs, functional outcomes, and social-emotional development of children.
  - Conducted the evaluation activities specified in the evaluation plan for the SSIP.
  - Developed the infrastructure for conducting online training with the CDC regions; hired trainers, set up the online network, set up the ability to record trainings; set up the capability to administer and analyze post-tests after each training. This will be part of a system for assessing critical competencies of providers in the regions.
- Improvements in social-emotional practices will be sustainable due to the imbeded practices for home visitation

A3. The specific evidence-based practices that have been implemented to date.

The following evidence-based practices have been implemented to date:

- Training of providers from to regional programs was conducted April, 2016 on evidence-based practices using a home-visiting curriculum in the natural environment that addressed the caregivers perception of the infant/toddler's social emotional skills and its effect on the parent's engagement with that child and focus on improving the parent's engagement
  - Providers began initial implementation of the home visiting curriculum with one family while receiving coaching from the author/trainer (August 2016 to December 2016)
  - Providers were to begin implementing the social emotional focused home base curriculum Mothers and Babies (MB) as a regular part of the service in addition to any services included in the IFSP (August of 2016 to present)
- Trainers were evaluated after the first two months of the implementation of the home visiting curriculum (Fall of 2016)

A4. Brief overview of the year’s evaluation activities, measures, and outcomes.

The Theory of Action, as well as the Detailed Evaluation Questions document (see attachment: WYC SSIP Detailed Evaluation Questions 2016-17.pdf) specifies the short-, medium-, and long-term outcomes of the SSIP. The expected outcomes include (1) service providers and parents acquiring new knowledge and skills surrounding functional outcomes and social-emotional development of babies and toddlers; (2) increased data quality of child outcomes measures; and (3) increased social-emotional skills of babies and toddlers.

The evaluations results after the initial training was very positive. 100% of the providers who attended the training stated their skills increased. This same evaluation also indicated that only 71% of the providers who attended the training were implementing the MB home visiting curriculum. The providers in the pilot regions have not had success in implementing the “Mothers and Babies Home Visiting Curriculum” to all families. The roll out of the implementation was limited due to the fact that the service providers had difficulty with adjusting the curriculum to the circumstances of the particular family. The curriculum was targeted for Pregnant Mothers and their mental health but the thought of the author and the Lead Agency is that the curriculum could easily be adapted to mothers with infants and toddlers. The training provided by the author of the curriculum and the coaching provided, ongoing. After the training was meant to support this interpretation for the implementation of the home visiting curriculum. Unfortunately, this was not successful and the implementation of the home visiting curriculum has slowed.

A5. Highlights of changes to implementation and improvement strategies.
We adjusted the SIMR baseline data and targets as a result of adding this second region. Stakeholder involvement in SSIP implementation:

1. How the State monitored and measured outputs to assess the effectiveness of the implementation plan:
   - How stakeholders have been informed of the ongoing implementation of the SSIP.
   - How stakeholders have had a voice and been involved in decision-making regarding the ongoing implementation of the SSIP.

2. How the State has demonstrated progress and made modifications to the SSIP as necessary:
   - How the State has reviewed key data that provide evidence regarding progress toward achieving intended improvements to baseline data for key measures, (d) Data collection procedures and associated timelines, (e) [If applicable] Sampling procedures, (f) [If appropriate] Planned data comparisons, and (g) How data management and data analysis procedures allow for assessment of progress toward achieving intended improvements.

B1. Description of the State’s SSIP implementation progress:

(a) How stakeholders have been informed of the ongoing implementation of the SSIP.

The EIEP SSIP Core team and the stakeholder group developed an implementation plan as specified in the four action plans submitted last year that includes the steps and timelines. Activities are proceeding on schedule (see the “Action Plan” attachments.)

(b) How stakeholders have had a voice and been involved in decision-making regarding the ongoing implementation of the SSIP.

B2. Stakeholder involvement in SSIP implementation:

(a) How stakeholders have been informed of the ongoing implementation of the SSIP.

Stakeholders have been involved through all implementation of strategies as outlined in the Theory of Action and as detailed in the Detailed Evaluation Plan. A SSIP Committee was developed using the members from the SICC who would meet on the detailed activities included in the SSIP Action Plan as implemented, and then would report to the SICC members quarterly (January 2016, April 2016 and July 2016). This Committee has since been disbanded (October 2016) and the SICC as a whole preferred to act as the stakeholder for the continuation of the SSIP review.

Stakeholder representation involvement includes the following stakeholders:

- Parents
- Wyoming Department of Education
- Other department of health agency representatives
- State wide Insurance representatives
- Department of Family Services representatives
- Private service providers
- Legislative representative

(b) How stakeholders have had a voice and been involved in decision-making regarding the ongoing implementation of the SSIP.

In-person stakeholder meetings at the quarterly State Inter-Agency Coordinating Council (SICC) meetings were held in July 2016, October 2016, and January 2017. At these meetings, detailed evaluation information was provided to the stakeholders.

C. Data on Implementation and Outcomes

1. How the State monitored and measured outputs to assess the effectiveness of the implementation plan:
   - How evaluation measures align with the theory of action,
   - Data sources for each key measure,
   - Description of baseline data for key measures,
   - Data collection procedures and associated timelines,
   - [If applicable] Sampling procedures,
   - [If appropriate] Planned data comparisons,
   - How data management and data analysis procedures allow for assessment of progress toward achieving intended improvements.

2. How the State has demonstrated progress and made modifications to the SSIP as necessary:
   - How the State has reviewed key data that provide evidence regarding progress toward achieving intended improvements.

3. How the State has demonstrated progress and made modifications to the SSIP.

4. How data support changes that have been made to implementation and improvement strategies:

5. How data are informing next steps in SSIP implementation.

Another change was made in the delivery of one of the evidence-based practices. One region implementing the Mothers and Babies Curriculum training. This will provide a better test of the impact of this curriculum on service providers and families. As a result of adding the second region, the number of children impacted by the Mothers and Babies Curriculum went from under 50 to over 200. We adjusted the SIMR baseline data and targets as a result of adding this second region. This was accomplished by discussions with the stakeholders on an ongoing basis through the implementation of the improvement strategy.

Data are informing the next steps in SSIP implementation by changing the delivery of the home visiting curriculum listed in the:

- Action Strand 2: Evidence-Based Practices

Data on the outputs, short-term outcomes, and medium-term outcomes as reviewed above indicate that the project is on the right path.

Phase III (Year 2) Report and Documentation Attached 3/30/2018.
As specified in Phase II, the Logic Model (see attachment) and the Theory of Action (see attachment) created by the EIEP SSIP Core Team, provide details on how each of the four coherent improvement strategies will lead to various short-, medium-, and long-term outcomes.

The WY C SSIP Detailed Evaluation Questions 2016-17 document (see attached file) provide details on the data sources for the key measures used to assess the implementation and outcomes of each coherent improvement strategy.

The general measures which go across the first three standards of action are:

- **Activity tracking.** Each SSIP-related activity is tracked quarterly or as needed.
- **End-of-Training Evaluations.** Evaluations regarding satisfaction with the training and its potential impact were collected.
- **Participant Tracking.** Participants who attended various trainings were tracked.
- **Follow-Up Surveys.** These measure participants’ perceptions of their skills on which they receive training and whether participants are implementing the skills quarterly or as needed.
- **Fidelity of Implementation Tools.** These tools are used by an external observer to measure implementation of new skills. These will be developed and used in 2017-18.

These measures allow the EIEP SSIP Team to assess progress toward achievement of the intended improvements.

The professional development and data quality coherent improvement strategies and parts of the evidence-based practices coherent strategy are being implemented statewide. The evidenced-based practices strategy that encompasses Mothers and Babies curriculum is being implemented in two regions of the state; as such, the parent support and engagement strategy that encompasses Mothers and Babies is also being implemented in two regions. Given the size of these two regions (29% of all Part C children are enrolled in these two regions), they provide a good test case of the Mothers and Babies curriculum.

To measure the impact of the coherent improvement strategies on child outcomes, the SSIP Team will be using an Interrupted time-series design with comparison group.

- Data on child outcomes (norm reference assessment results) will be collected and analyzed at defined time periods before and after the intervention by service providers.
- Comparable regional child development programs in the state will be identified to serve as a comparison group at the end of 2016-17 once the most recent child count and child outcomes data have been collected.

Baseline data will be discussed in section E.

The general measures which go across the first three standards of action are:

1. **Activity tracking.** Each SSIP-related activity is tracked quarterly or as needed.
2. **End-of-Training Evaluations.** Evaluations regarding satisfaction with the training and its potential impact were collected.
3. **Participant Tracking.** Participants who attended various trainings were tracked.
4. **Follow-Up Surveys.** These measure participants’ perceptions of their skills on which they receive training and whether participants are implementing the skills quarterly or as needed.

These measures allow the EIEP SSIP Team to assess progress toward achievement of the intended improvements.

The professional development and data quality coherent improvement strategies and parts of the evidence-based practices coherent strategy are being implemented statewide. The evidenced-based practices strategy that encompasses Mothers and Babies curriculum is being implemented in two regions of the state; as such, the parent support and engagement strategy that encompasses Mothers and Babies is also being implemented in two regions. Given the size of these two regions (29% of all Part C children are enrolled in these two regions), they provide a good test case of the Mothers and Babies curriculum.

To measure the impact of the coherent improvement strategies on student outcomes, the SSIP Team will be using an Interrupted time-series design with comparison group.

- Data on child outcome progress categories will be collected and analyzed at defined time periods before and after the intervention.
- Comparable regional child development centers serve as a comparison group at the end of 2016-17 once the most recent child count and child outcomes data have been collected.

These measures allow the EIEP SSIP Team to assess progress toward achievement of the intended improvements.
FFY 2017 Part C State Performance Plan (SPP)/Annual Performance Report (APR)

1. Concern or limitations related to the quality or quantity of the data used to report progress or results

How the State has demonstrated progress and made modifications to the SSIP as necessary:

- For the state wide professional development sessions at the WAVE conference, over 80% of participants indicated that the session was useful and the materials were good. Over 70% stated that they would recommend the session to others.
- For the state wide professional development training delivered through Project ECHO, 92% rated themselves as Moderately, Very, or Extremely Knowledgeable after the session compared to 64% before the session; 81% rated themselves as Moderately, Very, or Extremely Skilled after the session compared to 52% before the session; 63% stated that they would make change in their practices.
- For the functional outcomes training, participants answered almost 9 out of 10 questions correctly on the post-test.
- For the Mothers and Babies Curriculum training, over 80% of providers stated that their knowledge and skills increased and that they have implemented the curriculum.
- For the Mothers and Babies Curriculum training, 100% of the mothers receiving the curriculum stated that their knowledge and skills increased; over 85% indicated that their skills have increased. Between 71-100% of the mothers have implemented any given curriculum activity.
- The new child outcome scoring process appears to produce reliable and valid ratings. (More analysis will occur at the end of the 2016-17 federal fiscal year.)

(c) How data support changes that have been made to implementation and improvement strategies,

One change that was made in the implementation of the improvement strategies is that an additional region was added to the Mothers and Babies Curriculum training. In order to increase the potential impact of the SSIP on Part C children, we added another region to the Mothers and Babies project. This will provide for a better test of the impact of this curriculum on service providers and families.

(b) How data are informing next steps in the SSIP implementation and (e) How data support planned modifications to intended outcomes (including the SIMR)—rationale or justification for the changes or how data support that the SSIP is on the right path

Another change that was made in the implementation of the Mothers and Babies curriculum has to do with the delivery mode. One region started using a parent group approach instead of an individual-based home delivery approach. This was due to the inability of the providers to get individual mothers to sign up for the curriculum. Data from a parent survey documented the need to adjust the home visiting curriculum to include the Parent Group delivery of the home visiting curriculum.

Data Quality Issues: Data limitations that affected reports of progress in implementing the SSIP and achieving the SIMR

In general, the data collected has been of high quality, and the SSIP Team has had very few concerns. The most important data for evaluating progress is the social-emotional outcome data. To make sure this is of high quality we have implemented a new child outcome scoring process in the pilot regions.

D1. Concern or limitations related to the quality or quantity of the data used to report progress or results.

The most important data for evaluating progress is the social-emotional outcome data. To make sure this is of high quality we have implemented a new child outcome scoring process. The purpose for this pilot is to determine how to strengthen and standardize the Child Outcome rating process used as a measurement for progress across the state.

D2. Implications for assessing progress or results

So far, the implication of the SSIP is that the skills areas are progressing as measured by the Child Outcome rating process (see section E).
The Lead Agency is currently piloting a new process for collecting child outcome rating data from three regional Part C programs. These three pilot child development centers located in different regions across the state are using a standardized evaluation measure that uses a z-score for each of the three child outcome areas. The pilot regions are also using a similar system for capturing the outcomes. The pilot regions are entering the child’s z-scores on the foundation areas into an online system, and the information is then converted to a child outcome rating on a scale of 1-7. This rating is based off of the ECO Chart. Every child entered into the online system receives a rating. By standardizing the process for evaluating children’s social-emotional skills, we are confident that we will have reliable and valid ratings within and across regions. We are also confident that these ratings will allow us to determine the impact of the various SSIP improvement strategies on children’s social-emotional skills.

E. Progress Toward Achieving Intended Improvements

1. Infrastructure changes that support SSIP initiatives, including how system changes support achievement of the SiMR, sustainability, and scale-up
2. Evidence that SSIP’s evidence-based practices are being carried out with fidelity and having the desired effects
3. Outcomes regarding progress toward short-term and long-term objectives that are necessary steps toward achieving the SiMR
4. Measurable improvements in the SiMR in relation to targets

E1. Infrastructure changes that support SSIP initiatives, including how system changes support achievement of the SiMR, sustainability, and scale-up.

Infrastructure changes that support initiatives have been introduced in the professional development system. The Lead Agency developed the infrastructure for conducting online training with the CDC regions; hired trainers, set up the online network, set up the ability to record trainings; set up the capability to administer and analyze post-tests after each training.

In addition to the on-line training, the Lead Agency has contracted with two providers to support the regional programs on improving the writing of the IFSP Outcome so that they follow best practices (source: ECTA Writing IFSP Outcome Training) and to include more family outcomes to support the social emotional skills of the child. The current contractors have extensive experience in the Wyoming Early Intervention system. This strategy was outlined under “Evidence Based Practices: EI providers will consistently identify and include family outcomes that are designed to enhance social-emotional outcomes in the IFSP.” The contractors will provide coaching to the regions on-site and will allow the providers to review their own case files for reference during the training(source: ECTA Writing IFSP Outcome Training) and to include more family outcomes to support the social emotional skills of the child. This strategy was outlined under “Evidence Based Practices” -

- EI providers will consistently identify and include family outcomes that are designed to enhance social-emotional outcomes in the IFSP

The current contractors have extensive experience in the Wyoming Early Intervention system as sole practicers. This infrastructure has gone into effect state wide during the months of January 2017 and will continue until September 2017. This activity will be conducted on-site and allows the provider to review their own case files for reference during the training.

E2. Evidence that SSIP’s evidence-based practices are being carried out with fidelity and having the desired effects.

Several evaluation measures will address the issue of fidelity of implementation. In 2017-18, the Lead Agency will be creating an observational checklist for service providers administering the Mothers and Babies curriculum. In the meantime, we have asked mothers going through the program if their service provider is doing certain activities that they are supposed to be administering. Data show that the majority of service providers are implementing the curriculum as intended.

E3. Outcomes regarding progress toward short-term and long-term objectives that are necessary steps toward achieving the SiMR

The EIEP SSIP Detailed Evaluation Questions 2016-17 document shows baseline and/or current data (where available) on each key measure.

E4. Measurable improvements in the SiMR in relation to targets

The following display shows the progress on the SiMR. From 2013-14 to 2015-16, the percentage of students within in the pilot region exiting Part C at age-level has increased by over 10 percentage points.

Note that the Mothers and Babies curriculum started in the 2016-17. Thus, improvement as a result of this project will be collected for the first time in summer 2017. Note, however, that progress is being made on the SiMR goal already – prior to the Mothers and Babies project implementation. We attribute this to at least in part, programs own individual efforts to improve performance on the social-emotional outcome area.

The following display shows the progress on the SiMR. From 2013-14 to 2015-16, the percentage of students within the pilot regions exiting Part C at age-level has increased by about 10 percentage points.
Phase III (Year 2) Report and Documentation Attached 3/30/2018.

F. Plans for Next Year

1. Additional activities to be implemented next year, with timeline
   - The Lead Agency will provide more provider training opportunities using DEC RP for Assessments and for Family-centered practices in fall 2017 and spring 2018. These trainings will be provided using on-line training formats, competency tests, and on-site training formats.
   - The Lead Agency will continue on site monitoring of IFSPs to ensure that the priority concerns of parents and the social-emotional development needs of children are being addressed in the IFSP. This on site monitoring will provide the region with a summary of targeted training needs based on the IFSP review.
   - One of the regions participating in the Mothers and Babies curriculum will continue to receive ongoing coaching from Dr. Tandon.
   - The results of the state wide needs assessment will be examined to determine the training needs of providers surrounding IFSPs, functional outcomes, and social-emotional development of children.
   - The regions piloting the new child outcomes process will continue to do so.

F2. Planned evaluation activities including data collection, measures, and expected outcomes

   The evaluation plan (as outlined in the detailed evaluation questions document) will continue on schedule. In 2017-18 observational checklists and other fidelity of implementation measures will be developed and used.

   Tracking will consist of:
   - End of training questionnaire
   - Post test for content comprehension
   - Six-month follow up surveys and when possible, observations of practice

F3. Anticipated barriers and steps to address those barriers

   One barrier has been the difficulty in getting mothers to sign up for the Mothers and Babies curriculum in one of the regions. However, we believe this barrier has been addressed by changing the delivery mode of the curriculum to one based on home visits to one based on parent groups. We will monitor the attendance to determine if this is the case.

   Another barrier is implementing the new child outcome summary rating process state wide. This new process requires each region to administer the Battelle. Some regions indicated that the cost of the Battelle is prohibitive. The Lead Agency is examining funding sources to determine if additional funding for this component can be found.

   The activities listed in statement F2 will allow the Lead Agency to address barriers to delivery of practices, and any additional supports/technical assistance needed to support these practices.

F4. The State describes any needs for additional support and/or technical assistance

   The Lead Agency will continue to seek out technical assistance from NCSI and ECTA.

Phase III (Year 2) Report and Documentation Attached 3/30/2018.
