

State-Level Care Transition Core Measures/EDTC Report

Quarter 4 - 2020

Wyoming

The Medicare Beneficiary Quality Improvement Program (MBQIP) focuses on quality improvement efforts in the 45 states that participate in the Medicare Rural Hospital Flexibility (Flex) Program. Through Flex, MBQIP supports more than 1,350 small hospitals certified as rural Critical Access Hospitals (CAHs) in voluntarily reporting quality measures that are aligned with those collected by the Centers for Medicare and Medicaid Services (CMS).

The Federal Office of Rural Health Policy (FORHP) tasked the Flex Monitoring Team with producing a set of state-level reports for the core MBQIP measures.

This report contains the following core MBQIP measures:

- EDTC-All
 - Home Medications
 - Allergies and/or Reactions
 - Medications Administered in Emergency Department
 - Emergency Department Provider Note
 - Mental Status/Orientation Assessment
 - Reason For Transfer and/or Plan Of Care
 - Tests and/or Procedures Performed
 - Tests and/or Procedures Results

General Report Information

For the measures in this report, state-level data are included for previous reporting periods and the current reporting period. Additional state-level data and national data are also included for the current quarter, including:

- The number of CAHs reporting
- Average values
- 90th percentile

The number of records reviewed are reported at the state and national level.

The data for state and national values in this report only include CAHs with a signed MBQIP Memorandum of Understanding (MOU). The data used for this report are from the Federal Office of Rural Health Policy as reported to State Flex Programs.

Specific information on how data elements were calculated for inclusion in this report is outlined below. Please direct questions regarding your MBQIP data reports to your FORHP Project Officer. You can find contact information for your Project Officer at: <https://www.hrsa.gov/rural-health/rural-hospitals/region-map.html>.

Percentage Values

The EDTC measure is calculated as the percentage of patients that met all of the eight data elements.

Percentiles

The 90th percentile is the level of performance needed to be in the top 10% of CAHs for a given measure (i.e., 10% of CAHs perform at or better than the 90th percentile).

Measure Aggregation

State measures aggregate all CAHs in the state and national measures aggregate all CAHs nationwide.

Data Exceptions

- “N/A” indicates that no CAH data were submitted for this state.
